

Hey Kids!

My name is **MYAH**, and my job is to scan your eyes looking for clues that help your eye doctor find myopia.

Add your logo and practice name

Myopia means that your eyes see great when you're looking at things up close, but things that are far away look blurry.

if your eye doctor finds that you have myopia, he or she may need you to wear glasses or contact lenses to correct your vision and stop your eyesight from getting worse.

It's very important that we find myopia as soon as possible, so that your doctor can start treating it right away.

That's where I come in!

Your doctor may want me to scan your eyes to look for signs of myopia. But don't worry, the scan is fast and it doesn't hurt at all.

Let's get started on our search for myopia clues! Do you have any questions? Ask your eye doctor or technician to tell you more.
